

WINDOWS SYSTEMS ENGINEER:

Datacate is seeking a Windows Systems Engineer to join our growing team in Rancho Cordova, CA. The Windows System Engineer will provide Operation & Maintenance (O&M) support to Windows (2012 or later) servers and Windows (7, 8, & 10) workstations used internally for corporate organizational needs & externally for managed environments. This includes support for Windows Active Directory, Network Policy Server, Hyper-V, DFS, WSUS, Windows Azure Services for Windows Server and SQL Server. O&M support includes patch management, information assurance/security, Storage Area Network (SAN) management, and data backup solutions.

WINDOWS SYSTEM ENGINEER RESPONSIBILITIES INCLUDE:

- Administer and maintain endpoint solutions on supported networks. Develop, maintain and deploy automated Windows 2012 R2/2016/2019 Server and Windows 10 client builds. Perform Windows server migrations from V2V or P2V.
- Provide O&M support for various stakeholders (internal and external). Create and update documentation for designs and implementation strategies of new and existing hardware and software deployments.
- Work independently as well as in a support environment to meet deadlines while simultaneously performing multiple tasks.
- Address support requests as they come in while prioritizing project work, and ad-hoc requests.
- Work with staff of various departments as needed to resolve customer problems.

REQUIREMENTS:

- Must have demonstrated ability to produce system specifications, design requirements, planning documents, and technical publications and reports.
- Requires strong understanding of Microsoft supported Windows operating systems. Must be experienced in Windows Active Directory infrastructure administration to include Group Policy Objects management/creation. Must be experienced with WSUS/patch management.
- Requires strong understanding of Hyper-V, Systems Center Virtual Machine Manager and Windows Azure Services for Windows Server.
- Requires a strong understanding of SAN/NAS fundamentals to include but not limited to virtual machine and LUN provisioning, DFS, and iSCSI.
- Must demonstrate strong analytical and problem-solving skills.
- Must have the ability to multi-task while being meticulous.
- Experience with SQL Server is highly desirable.
- PowerShell scripting knowledge is highly desirable.
- Experience with ticketing systems is highly desirable.
- Experience with Jira and Confluence is a plus.
